

You don't need a security operations centre — you just need security that works. Our Managed Security Services give you 24/7 protection, threat detection, and expert oversight — without the cost and complexity of managing it yourself.

What Are Managed Security Services?

Cyber threats are constant — but most organisations don't have the resources for dedicated security operations. That's where we come in.

Our MSS offerings provide:

- Threat detection and response
- Vulnerability and configuration management
- Data security and dark web monitoring
- Monthly reporting and ongoing oversight

All services are scoped to your size, risk profile, and compliance requirements — whether you're starting from scratch or levelling up.

Managed Security Services

Organisational Security

- **Incident Management**
Support during security events, with triage, escalation, and forensic assistance if needed.
- **Security Reporting**
Monthly security reports showing threats detected, remediations taken, and risk trends.
- **Phishing Awareness & Simulation**
Optional training and safe phishing campaigns to reduce human risk.
- **Security Forensics (as needed)**
Log review and root cause analysis for incidents or alerts.

Threat Protection

- **Threat Intelligence & Monitoring**
We monitor public and private threat feeds for indicators relevant to your environment or industry.
- **Cloud, Endpoint & Network Monitoring**
Alerts for suspicious logins, malware, lateral movement, or misconfigurations.
- **Vulnerability Management**
Scheduled scans and patching insights for your systems, apps, and infrastructure.
- **Secure Configuration Management**
Audit and continuous hardening of critical systems based on best practices (e.g. CIS Benchmarks).

Data Security

- **Dark Web Monitoring**
We monitor for leaked credentials, exposed emails, and sensitive data on the dark web.
- **Data Activity Monitoring**
Watch for unusual access, exfiltration patterns, or privilege abuse.
- **File, Application & Employee Monitoring**
Optional oversight for insider threat scenarios (privacy-respecting and scoped to risk level).

Who This Is For

- **Councils or NFPs** without internal security teams
- **SMBs** that want protection but don't know where to start
- **Boards or executives** wanting oversight without building internal operations
- **Organisations** trying to satisfy insurance, ISO 27001, or Essential Eight requirements

What Our Clients Say

"We finally feel confident that someone's watching. Before this, we had no idea if we were exposed — now we get alerts, reports, and real people to help us respond."
— Finance & Risk Manager, Regional Council

Deliverables You'll Receive

- | | |
|---|---|
| ✓ 24/7 threat detection (based on selected package) | ✓ Alerts for suspicious behaviour or new risks |
| ✓ Monthly reporting and quarterly summaries | ✓ Recommendations for continual improvement |
| ✓ Access to cyber experts when issues arise | ✓ Optional vCISO oversight to tie it all together |

Optional Add-Ons

- Incident Response plan development
- Executive board reporting
- Integration with existing IT or MSP workflows
- Extended log retention and compliance archiving
- Cybersecurity training tied into user behaviour
